CAUTION :- The LED driver uses crowbar devices for surge protection. As such, high voltage electrical strength test should not be done with the driver wired into the luminaire. Typically, the driver would trip any voltage over 850V (pk), applied between any of the supply wires and the chassis. For certification purposes, special samples shall be provided for type testing, with the said component removed.

Installation Instructions:

Connect Wires as per details given on the Driver Screen. Keep proper ventilation around the LED Driver and do not stack any object on it. Also a 10-15 cm clearance must be kept when the adjacent device is a heat source. Do not exceed the declared Hot spot temperature(Tc max) under any circumstances.
