DALI dimming application

## Wiring diagram

 strings should be less than 0.5 V

## Activating DALI control mode

- After installation according to the wiring diagram of DALI control application, the driver will automatically switch to the DALI control mode after receiving any DALI command.

## Remarks:

Standard DALI control line voltage range:9.5V to 22.5 V ,type 16 V .

- The two DALI control lines polarity-reversible.
- Max. 64 DALI drivers per DALI control line.
- The maximum distance length of the DALI control line is 300 m at $2 \times 1.5 \mathrm{~mm}^{2}$.

DALI bus can be wired together with any mains voltage cables, but separate wiring is recommended.

## Wiring distance vs cable size

| Cable size | Distance |
| :--- | :--- |
| $2 \times 0.50 \mathrm{~mm}^{2}$ | max. 100 m |
| $2 \times 0.75 \mathrm{~mm}^{2}$ | max. 150 m |
| $2 \times 1.00 \mathrm{~mm}^{2}$ | max. 200 m |
| $\geqslant 2 \times 1.50 \mathrm{~mm}^{2}$ | $\max .300 \mathrm{~m}$ |

## Dimming curve

Remarks: The dimming curve can be selected by DALI configuration. The default is logarithmic dimming curve.

## Activating PUSH control mode

- After installation according to the wiring diagram of PUSH dimming application, short press the PUSH switch 3 times within 3 seconds, the driver will automatically switch to PUSH dimming mode.

## Remarks:

Max.50driversperPUSHcontrolline.
Turn on or turn off: short press push switch for 0.2-1s.
Dimming: long press push switch for $1-5 \mathrm{~s}$.

## Power on status:

- After power on,the light state will be the same as the last dimming level.
- If the light is on before the power is turned on, after turning the power back on, the brightness will be the same as the last time.
- If the light is off before the power is turned off, the light will be turned off after the power is turned back on. You need to press the PUSH-DIM dimming switch for a short time to turn on the light. The brightness after lighting will be the same as the last time.

## Multiple lights synchronize control operation

method 1: Step 1:long press the PUSH-DIM switch, confirm each light is on.
Step 2:short press the PUSH-DIM switch,confirm each light is off.
Step 3:long press the PUSH-DIM switch,confirm each light is from darkest to brightest and all the lights are synchronous.
method 2: - Long press the PUSH-DIM dimming switch for more than 15 s, all drivers will output $100 \%$ brightness.
