

GET BACK IN THE SADDLE WITH
FULHAM®

Before we re-open our facilities, lighting systems must be safe for public occupancy in accordance with various codes & regulations. That means not only making sure everyday fixtures function (such as fluorescent troffers), but also that their *backup systems* are working for power outages.

During the shutdown, monthly emergency fixture testing may have been missed. It is important to test these system when opening a space to occupants. Some systems may test okay, while others may need to have the batteries replaced.

Fulham's got your back! Don't forget our long-running series of:

- FireHorse Emergency Fluorescent Ballasts <https://tinyurl.com/y8sx24rr>
